

episode and participant counts
(n = episodes, p = participants)

observed ΔG at 60 min (mg/dL)
(onset to +60 min)

observed – frozen prediction at 60 min (mg/dL)

n = episode count; p = participant count. ΔG at 60 min = observed glucose change from refined onset to +60 min. Signed residual = observed – frozen model prediction. Suppressed cells: insufficient n.
